

KaboDitsha A Web-based Land Management System for Botswana

Presented by Boitsholo Ramokhua | Student ID: 202202152
Supervisor: Dr. M. Lefoane | University of Botswana | 30 April 2026

Mission Statement

"To transform Botswana's land allocation from a slow, opaque, paper-based process into a fast, transparent, digital, and accountable system that serves every citizen equally." KaboDitsha is committed to revolutionizing how land is allocated in Botswana, ensuring fairness, efficiency, and transparency for all citizens through modern digital solutions.

The Problem

Three Numbers That Define the Crisis

152,498

Pending applications
at Kgatleng Land
Board alone.

64%

Applications found
ineligible after
vetting due to
duplicates or
disqualifications.

17 Years

Longest documented
backlog at Bobonong
Land Board (2005–
2022).

The Problem

What This Means for Citizens

No Transparency: Citizens apply blindly with no way to compare wait times or availability across different Land Boards before submitting applications.

No Tracking: There is no system to check queue position or application status without physically visiting Land Board offices during working hours.

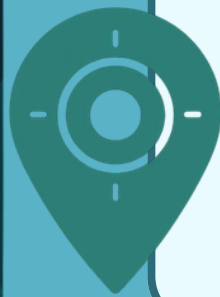

No Communication: Notifications are sent only via postal mail, meaning many applicants never receive critical updates about their applications.

OUR SOLUTION: Three Goals

Goal 1: Digitize

Transform the entire land application process from paper-based to fully digital, eliminating manual paperwork and enabling seamless online submissions.

Goal 2: Real-Time Tracking

Provide citizens with live queue position visibility and instant application status updates, removing uncertainty from the waiting process.

Goal 3: Accountability

Ensure complete transparency and auditability across all Land Boards for every decision made, building public trust in the system.

OUR SOLUTION: Four Users. Four Dashboards.

Applicant

- Submit applications online
- upload required documents
- track status
- receive alerts on status changes

Staff

- Review applications
- verify uploaded documents
- update application statuses

Manager

- view analytics dashboards
- view audit trails
- export reports
- compare metrics across Land Boards

Admin

- user management
- land board managements
- global audit trails

OUR SOLUTION: From Application to Approval

Online Application

- 4 step guided form.
- Upload required documents.
- Immediate confirmation upon submission.

FIFO Queue System

- Fair first-in-first-out processing.
- Auto-rebalancing.
- Real-time queue position visibility.

Staff Review

- Document verification process.
- Eligibility assessment checks.
- Flags and notes for follow-up actions.

Live Demo Preview

Applicant Dashboard

- View your real-time queue position across all Land Boards.
- Track your complete submission history from application to decision.
- Monitor document verification status with instant alerts when action is needed.

Smart Board Matcher

- Compare wait times across all Land Boards instantly.
- Get ranked recommendations to find the fastest path to land allocation.

Technology Stack

Frontend: React 18, Vite, Tailwind CSS, Recharts, Leaflet

Backend: Node.js, Express.js, JWT, bcrypt, Nodemailer
PostgreSQL & Prisma ORM

Infrastructure Git & GitHub for version control
